Technical information

Technical description

The valves FT 2251/2-02 allow flow regulation in both directions. Of unmistakable style they are manufactured with materials, also suitable for applications with fluids other than oil (such as: air, gas and liquids in general). The working pressure does not exceed 350 bar. They have the same characteristics as the FT 2257 series: • accurate flow regulation; • efficient metallic sealing; • simple setting of flow rates; • secure against accidental needle lift-out; • secure needle position with locking screw inserted in the knob; • panel mounting provision, for which special lock nuts (G) are supplied on request.
