

In line gauge isolators with lateral 1/2" port for inspection

FT 01.290

In line gauge isolator for manometer, connection M-F with 1/2" lateral port with threaded cap

In line needle valves, with 1/2" lateral port and handwheel

Carbon steel

Technical information

Technical description

They are generally used for hydraulic elevators subjected to initial and periodical tests by the institution in charge. They are normally used to protect the manometer as they have the double function of dampening pressure shock, when opening, and of isolating it from pressure line. Moulded in high-resistance steel, protected by an accurate treatment, subjected to strict tests, they ensure reliability and long life. A rotating swivel nut allows the user to plug the manometer, directing it to the more suitable position, with a single blocking position. The sealing, supplied as standard, and inserted in the nut, prevents any leakages between the connection and the gauge. For pressure gauge with taper threads, it will be necessary to use copper washers FT 1201 (to be requested separately). Suitable for pressure up to 400 bar and temperature from -20° to +100° they can be panel mounted by use of panel nut (G), supplied on request.

Materials

CORPO VALVOLA / VALVE BODY	Acciaio/Steel 11 S Mn Pb 37-UNI EN 10087
SPILLO / NEEDLE	Acciaio/Steel 35 S Mn Pb 10-UNI EN 10087
GUARNIZIONI / GASKETS	Di serie NBR - A richiesta FPM / Standard NBR-on demand FPM
ANELLI ANTIESTRUSIONE / ANTI-EXTRUSION RING	PTFE
MANOPOLA TIPO MP / KNOB TYPE MP	NYLON 66
