

Company in the province of Varese wins an European tender: Fratelli Tognella Spa “ investing for the future “

The eco-sustainability: a wave that is revolutionizing the global economic landscape. In a perfect harmony with this thought, the European Union launched a visionary recovery plan, outlining a sustainable future for Europe. An ambitious plan, set as an investment in the future of the continent, for a recovery that would be not only sustainable, but also uniform, inclusive and fair. On this trail of innovation and sustainability Fratelli Tognella S.p.a. stood out in an extraordinary way, winning the prestigious European tender PNRR “ sustainable investments 4.0 “ thanks to its “ project of production capacity and installation of photovoltaic system for self-consumption ” ref. IS0109539.

A company with its heart in the province of Varese, active for over 60 years in the metalworking industry, specialized in the design and production of hydraulic valves. Tognella products are a mainstay in the mechanical industry, used on machine tools, agricultural machinery, earth moving and construction sites. A success made even more brilliant from the unique Italian style – from the attention to details to the domestic production – without ever losing sight of the respect for the environment. Thanks to their reliability and versatility, Tognella products, 100% Italian, are demanded worldwide.

Tognella secret weapon: an European vision that results in concrete actions, a real leap into the future. The firm invests without reserve in research and automation of production processes, in order to ensure not only efficiency, but also security and wellness of its employees.

An engagement that found its apex in the European Union’s contribution PNRR obtained in 2023, allowing the implementation of the ambitious plan of technological renewal of the production plants and the covering of the company roofs: replaced with a new insulated cover that offers an excellent heat insulation, now the climatic conditions in the workplace are improved even further. In addition to the installation of more than 1000 photovoltaic panels, the output power of 450 kWh results in an annual energy self-consumption equal to 60% of the total company needs. In other words, Tognella with this project has reduced the harmful emissions and the energy waste and stands confident and more competitive on the market.

Tognella never stops

Its mission goes beyond the only adoption of the sustainable solutions, focusing more and more on the continuous innovation and on the environmental impact reduction. And the future? It is going to be brighter: Fratelli Tognella renews its commitment in the national territory, promoting a corporate culture based on the sustainability and the respect of the environment. An engagement that reflects in high-quality products, in the wellness of the employees and in the protection of our precious ecosystem.
